El conexionado en un sistema de AUDIO es exactamente el mismo. No existe el terminal "2C", pero aparece el "Aux2" cuya conexión es igual que el terminal "Aux" aquí representado.
 El pulsador "Aux/ON" es para realizar un autoencendido sobre el teléfono, por consiguiente no lleva conexión.

The wiring connections are the same for an AUDIO system. It doesn't appear the "2C" terminal, but we have the "Aux2" terminal. Its connection is the same that the "Aux" terminal we can see here. The "Aux/On" pushbutton is to make a selfstarting with the phone, that's the reason it doesn't have any connection wire.
