Functioning

calling and conversation

When a call is received from the entrance panel, the monitor starts ringing for a maximum of 30 seconds. As standard, it performs 4 rings with intervals of 4 seconds between each of them.
During the call period the image appears on the screen, the user can open directly, pressing the button or establish a conversation pressing the button The conversation has a maximum of 90 seconds. If you want to continue with the conversation, press the button and then

self-starting

By pressings the button and then the user can establish communication with the PANEL / CCTV CAMERA that he wishes in the case of more than one is present in the installation.
With each press the system will automatically switch to the next device, showing the image and allowing the opening of it by pressing the button

calling to concierge

If the monitor is in standby, by pressing the button and then , a call will be made to the concierge unit. If the system does not have a concierge unit installed, the monitor will emit an error beep.

melody selection and adjust of the calling volume

If the monitor is in standby, press and then . With each press we will select a different melody and a different calling volume.
There is 4 call melodies and 2 volume levels for each one (MEDIUM and HIGH)

ding dong function

The monitor allows to replace the interior bell of the house, this integrates the two calls (outside panel and house bell) in a single device. These calls will be differentiated with different melodies and flashes automatically. In order to have this function, you only have to connect the button of the house bell to the monitor.

cctv surveillance function

The monitor allows the control of panels and CCTV cameras automatically. First we press the button and then Each press on the button activates a different device. To do this, each CCTV camera must be installed with an Auta digital interface.

privacy function

The monitor incorporates a privacy mode in which the ringing tones are muted for a selected time. If the privacy mode is active, the monitor shows by flashes the selected period of time (1 flash - **2 hours**, 2 flashes - **4 hours**, 3 flashes - **8 hours**). After the selected period of time finished, the monitor automatically returns to standard mode. To activate the privacy mode press the button , select the desired period of time by pressing the button
Each press will activate a different period of time between the 3 available ones.

function door sensor

If a door contact is installed, the monitor allows monitoring, in real time, the entrance to the building. If the door remains open for a longer period of time than stipulated in the settings, the system sends a visual alarm to all the monitors of the installation that remains active until the door is closed correctly.
