management menus

Below there are detailed the different menus available at the guard porter.

functioning modes

C OK 1 OK

① A	**Standard** - The call from the street sounds in the guard porter, if it can not be answered, it is automatically re-directed to the flat.
② B	**Direct** - The call from the street sounds in a flat directly. The guard porter can only monitor. Do not intervene
③ C	**Do Not Disturb** - The call from the street sounds in the guard porter, if it can not be answered, it will end in it.

navigate by the data base

C OK 2 OK

④ Within this menu we can make a tour of the database. Pressing ① we move forward and pressing ④ backwards.

management of missed calls

C OK 9 OK

①	Each press advances a record in the queue of missed calls. When we reach the end it starts with the first one.
②	Pressing will erase the record in which we are at that moment. You will need confirmation.
③	Pressing will erase the entire queue of missed calls. You will need confirmation.
OK	Pressing will call the record in which we are. The system will follow the operation described on the next page.

Functioning

call and conversation

When a call is received from the entrance panel, the guard porter starts to sound for a maximum of 30 seconds (**see operating modes**). As standard, it performs 4 rings with intervals of 4 seconds between each of them.

The control panel will show information about the user to whom the call is being made and the panel ID number from which it is being called. The user can open directly, by pressing the button 🔓, or pick up the handset to establish a conversation. The conversation has a maximum of 90 seconds.

self-starting

Pressing the button [AUX 1 / ON] the user can establish communication with the last STREET PANEL from which a call has been received, if there is more than one. The system will allow its opening by pressing the button 🔓

call to a flat

If you want to make a call to any home in the database, you must pick up the handset. The display will turn on automatically, the user will dial the call code directly ① ② ③ ④ ⑤ ⑥ ⑦ ⑧ ⑨ ⓪ and subsequently 🆗

call to another guard porter

By picking up the handset and pressing the button 🔓, the symbol will appear, introducing the central number ① ② ③ ④ ⑤ ⑥ ⑦ ⑧ ⑨ ⓪ and by pressing 🆗, the user will be able to establish communication with any other guard porter that he wishes in the installation.

management of missed calls of flats

If the guard porter is in standby, the status LED flashes, it means that there are missed calls unmanaged. To access the call queue, press Ⓒ 🆗 ⑨ 🆗 . Once inside the list we can navigate through the different calls by pressing ① . In each record of the list we can return the call, by lifting the handset and pressing the key 🆗 , or directly suppress this call if desired by pressing ② . If we return the call and the house does not respond, the system will keep that call in the list as unattended. If the call is answered at home, the system will automatically delete the call from the list considering it attended.

transfer a call / make a query

When a call is received from a panel, the user can see all the information of said call on the screen. From which access is being called, to whom the call is directed ... Once attended, the user can directly transfer the call to a house by pressing the button 🆗 . When the call is transferred, the guard porter loses control of the call, changing to "Busy line" mode.

The system also allows, instead of directly transferring the call to the flat, that the user can make a query and check if they want to answer the call by pressing Ⓒ . If you want to answer the call at home, you must press the button 🔓 on your monitor / phone. The control panel will switch to "Busy line" mode. If, on the other hand, the flat does not want to answer the call, they will hang up the handset and the user will press the button [AUX 1 / ON] on the guard porter to communicate with the external panel again.
