¿ Do you know …

## … our ONEX Wi-Fi monitor has a new firmware version ?

Continuing with our philosophy of continuous improvement, which allows us to continue enriching the experience of our users, we are pleased to inform you that a new firmware version for the ONEX Wi-Fi monitor is now available.

Other improvements include the following:

- *We have redesigned the internal update system. Now the process is faster, including a progress indicator and error detection.*
- *New "update available" indicator in the monitor status bar. The verification is carried out automatically and transparently for the user.*
- *Improvements in the Wi-Fi connection.*
- *Implementation of the multi-language system. Now we can select different languages for the menus.* **Spanish**, **English**, **Portuguese** *and* **French**.
- *Management of up to 15 panels_cctv cameras from our monitor or mobile terminal.*

To update our terminal we just have to check that the Wi-Fi icon is blue and the monitor shows the time correctly, then we will follow these simple steps:

HH : MM

When the process ends, the monitor will restart automatically.

We will know that our device has been updated correctly by checking the current software version:

uP: V1-230419

If when checking the installation we see that it does not show the indicated version, we can repeat the update process again.
